Objective

Garner experience working as a Junior Developer involved in design and implementation of software, working with a high-quality team and producing a quality product for clients.

Experience (Projects are available for viewing in my repo through the website)

Real Estate Website (eleanorsytan.com)   **July 2016 – September 2016**

Created a real estate website for a client using HTML/CSS/JS/Boostrap integrating MLS-API to show the client's current and sold properties. Website features a modern design, animations, contact form and property listings.

Hybrid Mobile App (Entote Mortgage Calculator)   **May 2016 – July 2016**

Available on the Google Play Store. Mortgage calculator created for a client using Ionic1/Angular1 frameworks that calculates mortgage based on user provided parameters.

Hybrid Mobile App (Mapbox Directions)   **May 2016 – July 2016**

Available on the Google Play Store. App using Mapbox Directions API created using Ionic1/Angular1 frameworks that returns turn-by-turn directions based on 2-location input.

Student Website Developer (BGActors)   **Jan 2016 – April 2016**

Semester-long project to create a website based on Wordpress to be used as a social hub for background actors. Features implemented include forums, user roles, database, activity wall, private messaging, Mailchimp integration.

GPS/ Tracking Android App (Track Commander)   **April 2016 – May 2016**

Team project assigned on updating a GPS-tracker android app with features such as a progress bar, compass, live maps, and message history. Built using android studio.
